

DUE DILIGENCE SERVICES

Regulatory Services—US and Europe

toXcel works with legal and accounting groups (either independent or collaborating contractors) in the following types of issues:

- Mergers and Acquisitions where regulatory compliance and vulnerability analysis are key aspects of the due diligence process.
- Analysis of regulatory vulnerability and assessment of emerging regulatory issues.
- Novel compound development when venture capital sponsors require assessment of regulatory status or potential regulatory issues.
- Identification and clarification of technical matters to elucidate the critical issues in product development.
- Assessment of product development costs to input into the investment requirements and identify the target end points for taking options and further financial positions.
- Providing expert third party technical support for review of confidential documents for acceptability to the regulatory authorities for all aspects of safety evaluation.
- Access co-development strategies to optimise investment potential.
- Assess the scientific validity of available data.

We have experienced regulatory toxicologists and chemists and other specialists who routinely evaluate data and manage study programmes. They are fully aware of the parameters that investors consider to be critical to the decision-making process and expect to have addressed.

toXcel has extensive experience in the multidisciplinary process of due diligence and has strategically aligned partners for comprehensive execution of all critical components. **toXcel** can participate as a technical advisory partner with an existing client team or provide a full operational group.
